PROJECT CASE STUDY | ENTERPRISE DIGITAL COMMERCE

Global Salesforce Commerce Cloud & Omnichannel Ecosystem

Multi-Region Storefront Architecture, Enterprise API Integration, Security & Service Routing

INDUSTRY	DOMAIN	ENGAGEMENT TYPE	CORE ECOSYSTEM
Enterprise Retail & Digital Commerce	**Global E-Commerce, Integration & CX**	**Architecture, Implementation & Security**	**Salesforce Commerce, Service, OMS & Data Cloud**

PROJECT OVERVIEW

We architected and delivered an enterprise-grade global digital commerce and customer service ecosystem built on Salesforce Commerce Cloud. Designed for rapid international expansion, the solution unifies multi-region storefront operations, real-time ERP and lead-sourcing integrations, enterprise security governance, and high-touch omnichannel customer support into a single connected architecture.

THE CHALLENGE

Scaling digital commerce across international markets requires balancing global brand consistency with strict regional tax, currency, and privacy rules. The primary objective was to eliminate fragmented regional systems, establish real-time data synchronization with legacy ERPs, enforce GDPR/CCPA compliance, and equip service agents with complete visibility into customer orders and storefront activity.

SOLUTION SCOPE & KEY DELIVERABLES

1. Global Storefront & Hyper-Local Execution

- **Unified Global Core Architecture:** Developed a scalable 'Global Template' storefront strategy enabling rapid launches in new regional markets while preserving brand consistency.
- **Deep Localization:** Configured localized currency handling, regional tax compliance, multi-language translation management, and country-specific checkout flows across international regions.

2. Enterprise-Grade Integration Design

- **Lead Sourcing & Ecosystem Connectivity:** Architected a robust integration layer connecting the Salesforce ecosystem with external lead sourcing platforms, legacy ERPs, and marketing endpoints.
- **API-First Approach:** Implemented secure REST and GraphQL integrations to ensure continuous, real-time data synchronization across the enterprise without disrupting business continuity.

3. Advanced Monitoring, Security & Compliance

- **Salesforce Shield Implementation:** Configured Platform Encryption, Event Monitoring, and Field Audit Trails to safeguard sensitive customer data and satisfy strict global privacy regulations (GDPR and CCPA).

Contact our team at **contact@horigineitsolutions.com** or visit **www.horigineitsolutions.com**to discuss your project requirements.

- **Security Centre Tuning:** Unified security health insights across multiple environments, continuously monitoring security policies and detecting configuration drifts immediately.
- **Data Cloud for Monitoring:** Configured Salesforce Data Cloud as an operational and behavioral intelligence layer, delivering deep visibility into platform performance and customer journey analytics.

4. High-Touch Omnichannel Service Routing

- **Intelligent Omnichannel Routing:** Built an automated routing framework within Service Cloud to instantly direct high-value VIP customer inquiries to specialized support agents.
- **Unified Agent Workspace:** Equipped service agents with a 360-degree customer view—combining real-time order history from Salesforce OMS with storefront interactions—to reduce Average Handle Time (AHT).

TECHNOLOGY & PLATFORM STACK

Commerce & Storefront	Salesforce Commerce Cloud (Global Core Template, Multi-Currency, Tax & Localization)
Integration & APIs	REST APIs, GraphQL, Legacy ERP Connectors, Lead Sourcing & Marketing Endpoints
Security & Compliance	Salesforce Shield (Platform Encryption, Event Monitoring, Field Audit Trails), Security Centre, GDPR / CCPA
Data & Analytics	Salesforce Data Cloud (Operational Telemetry & Customer Journey Intelligence)
Customer Service & OMS	Salesforce Service Cloud (Omnichannel Routing, 360° Agent Workspace), Salesforce Order Management (OMS)

KEY BUSINESS IMPACT

- **Accelerated Global Time-to-Market:** Enabled rapid regional storefront rollouts through a reusable global core template with localized currency, tax, and language support.
- **Seamless Enterprise Data Flow:** Eliminated data silos by connecting storefronts, legacy ERPs, and marketing systems via real-time REST and GraphQL APIs.
- **Enterprise Security & Regulatory Compliance:** Protected sensitive customer records and prevented configuration drift across environments using Salesforce Shield, Security Centre, and Data Cloud.
- **Faster, High-Touch Customer Support:** Reduced Average Handle Time (AHT) and elevated VIP service quality through intelligent omnichannel routing and a unified OMS agent workspace.
